

- Anthracnose tolerant
- Good for late planting, double cropping, and dry land practices
- Excellent yield potential

This medium-early maturity hybrid has high tolerance to drought and will produce outstanding yields under dryland or limited irrigated conditions.

The semi-open panicle has good exertion and is easy threshing. Leaf quality is very good and shows stay green and excellent resistance to drought. Standability is very good because of its stiff stalk and strong deep root system.

This hybrid works well for a double crop in most areas. Trials show an excellent adaptation to high humidity and diseases (Southeast USA, Gulf Coast/South Texas, and South America) and dry areas with or without irrigation (High Plains).
