

Southern Star

- Late maturing sorghum-sudangrass
- Superior drought resistance
- Multi-purpose forage
- Wider window for harvest
- Higher protein and digestibility than conventional sorghum-sudan hybrids
- High green leaf retention
- Excellent tillering, regrowth and recovery

The late maturity concept produces hybrids that are 20-30 days later than conventional sorghum-sudan hybrids. This later maturity allows a wider window for harvest of high quality leaves before boot stage is reached. This hybrid had greater IVTD value and a higher crude protein. IVTD of this hybrid was 10+% more than a commercial check in trials. This hybrid has a wide range of adaptation due to its incredible drought resistance and yield of quality forage.

Plant Characteristics

Plant Color	Plant Texture	Standability	Plant Height	Panicle Type	Midrib Type	Tillering & Regrowth Capacity		Grain Color Planted
Purple	Juicy	5	7-8 ft.	Sudan	Normal	5		Red
Maturity/Yield				Planting Information				
Days to 50% Anthesis	Harvested Grain Tannin	Harvest Mode	Irrigated Tons/Ac (Multiple Cuts)	Approx. Seeds/Lb	Lbs/Ac Dryland Row	Lbs/Ac Dryland Broadcast	Lbs/Ac Irrigated Row	Lbs/Ac Irrigated Broadcast
90-95	No	H/G	25-30	16,000	5-15	15-20	10-15	35-40

Standard Rating:

A standard 5 point rating system is used unless otherwise indicated. Ratings are based on comparison with other products of like maturity.

1.....Poor

5.....Excellent

** Agronomic data are insufficient to make a rating at this time
